Re: 2010 Sewer Rehabilitation Project

With the high water of the last several years Grand Lake Public Works Authority (GLPWA) has had significant infiltration causing us to treat lake water and rain water. This additional volume from nonusers is wasting capacity at the sewer plant and is increasing expenses in the form of electricity, manpower and pump maintenance.

GLPWA has applied for and received a loan/grant to repair/replace sewer mains and manholes with the intention of reducing infiltration.

GLPWA will start this project immediately with plans on completion in August 2010.

We will be working on Manholes and gravity lines, replacing everything that is below maximum lake level (757') and other known sources of infiltration. Approximately 90% of the manholes will be replaced and there will be maintenance preformed on most of the rest. Much of the gravity lines will be worked on. If there is a manhole on your property or the gravity main on your property is below 757', expect a crew to be on site this spring/summer.

GLPWA will do our best to repair damage and restore property to proper conditions; this does not include sod, replacement of shrubs or landscaping. If you have planted shrubs around a manhole or lift station, they will be removed.

We apologize for any incontinence.

Jim Anderson
GLPWA Manager
